

ABSTRACT OF THE DISCLOSURE

1
2 Methods for treating osteolytic bone lesions of all kinds are disclosed. The
3 method includes making two holes in the bone adjacent the lesion and first
4 applying a negative pressure source to one hole and then injecting a flushing
5 fluid into the other. The method also includes replacing the flushing fluid line with
6 a source of, at least, bioimplantable material to fill the void left by the flushed out
7 bone lesion.
